## **Policy Surrender**

The Master Policyholder may surrender the policy at any time. On surrender of Master Policy, the Scheme Account value payable shall be subject to market value adjustments as mentioned below.

On surrender of the policy the Master Policyholder will have two options:

- Accept the interest amount as per the interim interest rate applicable at the time of surrender post which all the benefits under the Policy shall cease; or
- Accept the surrender value (without the interest amount for the financial year in which the scheme is being surrendered) and wait till the financial year end for the interest amount to be allocated.

## **Market Value Adjustment (MVA)**

Scheme Account value shall be subject to Market Value Adjustment (MVA) upon bulk exits and complete surrender. MVA is related to the decrease in the value of the assets held by the Company in the non-participating fund associated with this product at the time of the bulk exit / surrender. This decrease in value can be passed on to the Master Policyholder. If the amount to be paid on total exits during the policy year exceeds 25% of the Scheme Account value as at the beginning of the year, such transactions shall be treated as bulk exits, where exit shall be as per the scheme rules and that exit shall mean exit of the member from the group.

Market Value Adjustment shall not be applicable for the amounts below the amount which represents the bulk exits and shall be applied only to the amount which is over and above the amount representing bulk exit. Further, MVA shall be applied only if there is a need for the Company to realize the investments at losses.

In case of DB schemes, where the Scheme Account Value is insufficient to cover a proposed withdrawal after adjusting for MVA, if applicable, the Company may restrict the amount of withdrawal or foreclose the Master Policy by paying out the surrender value to the Master Policyholder.

## **MVA Calculation**

MVA Amount shall be derived by following formula:

MVA Amount = MVA Factor \* Amount over and above the 25% of the Scheme Account Value at the beginning of the Policy year (including the Interim Interest accrued)

MVA Factor = Maximum (0, Total Scheme Account Value – Market Value) / Total Scheme Account Value

Where

- Total Scheme Account Value is the sum of the Scheme Account Value (including the Interim Interest accrued) of all the schemes written under the product at the time the market value adjustment is carried out.
- Market Value is derived from the revaluation of entire assets earmarked separately for the product at the time market value adjustment is carried out.

## **Section 41 of the Insurance Act, 1938 (as amended from time to time)**
